Software Engineering Associate, Medidata-Dassault Systèmes

Aug 2020-April 2023

- Worked on building a configuration management microservice for managing settings required for conducting clinical trials.
- Delivered production fixes for Urgent software release.
- Translated the Figma designs into efficient user interfaces and optimized the code base by creating reusable components using the Storybook tool.

PROJECT

PhotoGram ([Link](#))

- Built a responsive website which has a user feed with an infinite scroll to view photos and the ability to view user profiles, using React js.
- Unsplash public API is used to facilitate rendering of pages on the website.

TODO ([Link](#))

- TODO is a responsive single page application which allows users to create an account, reset password through email and add, update, reorder and delete tasks.
- The application is built using MERN stack, webpack, babel and json web tokens are used for user authentication and verifying link for password reset.
